

AsphaltMine Bulk Upload: Quick Start

In order to start using this page, here is an [excel](#) file to download.

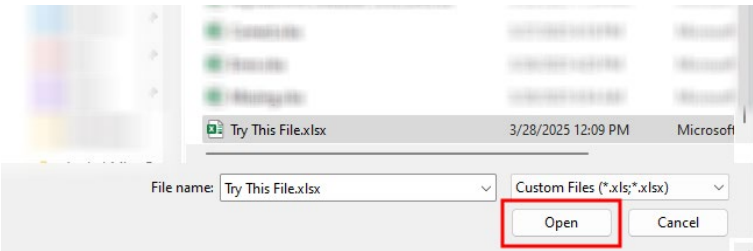

Extract Records

In the "Bulk Upload" page, follow these steps:

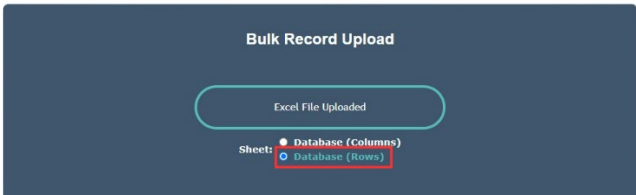

- 1) Click the "Upload AsphaltMine Excel File" button.

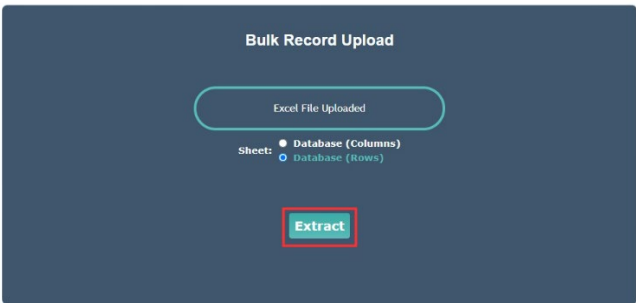

- 2) Select the file from your device and upload it.

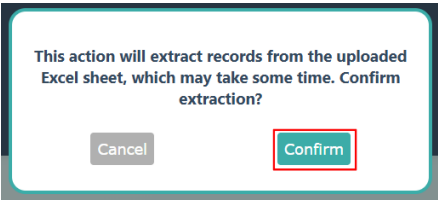

- 3) Specify the name of the sheet used. In our sample file, the "Database (Rows)" sheet was used.

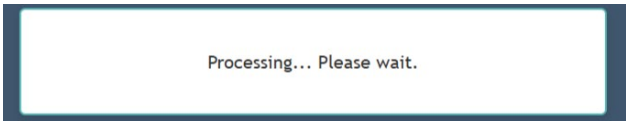

- 4) Click the Extract button.

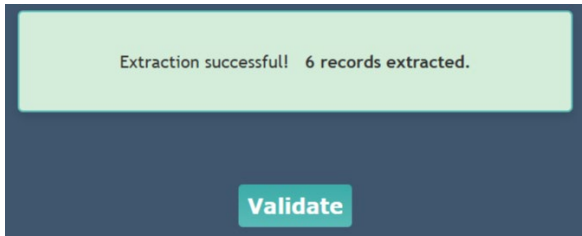

- 5) Click Confirm

Once clicked, a message will appear below the button, as shown. It may take more time if the Excel sheet has tens or hundreds of records

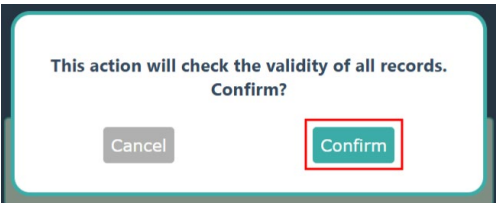

After the process is finished, a message will appear indicating successful extraction of records, and stating the number of records extracted. A Validate button will appear under it.

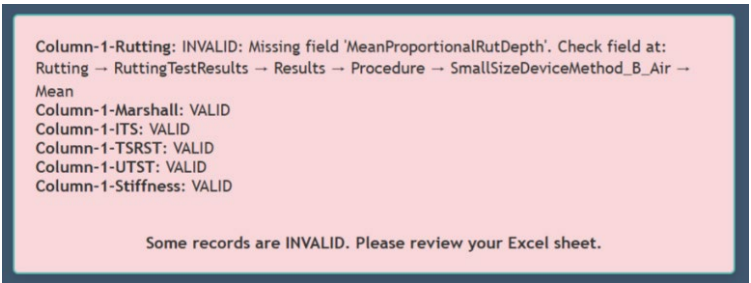

Validate Records

You can validate the extracted records before saving them to check if all information is present in a correct format. To do so, follow these steps:

- 1) Click the Validate button shown above.
- 2) Click Confirm.

Once clicked, a message will appear below the button, as shown. It contains the column or row of the record, and the type of test extracted, followed by the validation results. The word "validate" indicates correct format, while the word "invalid" indicates incorrect format, showing the cause of error and position of the field in the table.

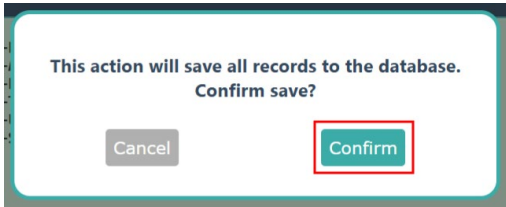

In a different case, if all records are valid, a message will clearly mention- ing that. A Save button will appear under it.

Save Records

You can save the extracted records to the database by following these steps:

- 1) Click the Save button shown above.
- 2) Click Confirm.

Once clicked, a message will appear below the button confirming that all records have been successfully saved to the database

In order to reset the page at any time during the, you can click the Reset button on the left side bar.

For more detailed information, refer to the [Tutorial](#) page.
