

AsphaltMine Database: Quick Start

In order to start using the form, here is a [record](#) to download.

Load and View

In the "Data Curation" page, follow these steps:

- 1) Click the "Choose Record from your own Device" button.

- 2) Select the record from your device and upload it.

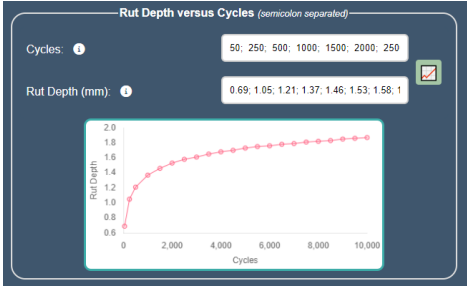

- 3) Specify the elements to upload from the list: Data Source, Mixture, Sample Properties, Results, or General Notes.

- 4) Click the Load button.

Once clicked, the fields in the form will be populated. You can then navigate through the record using the tabs.

In graph fields, you can visualize the data by clicking the graph icon within the form, as shown below.

Once clicked, the graph will appear directly beneath the fields in their section, as shown.

Save to the database

You can save new records to the database using the form by following these steps:

- 1) On the right sidebar, click on the performance tests tab.

- 2) Select the test or tests you desire. You can select multiple tests to fill out at the same time.

- 3) Click Apply. The form is now ready to be filled out.
- 4) Fill in all the fields with the data you have, especially the required fields.
- 5) Click the Save button.

- 6) Click Confirm.

A popup message confirming the data has been saved should appear in the top right corner.

Make sure to save the records to the database before exiting the page to avoid losing any data.

Download using the form

You can a certain record in XML format using the form by following these steps:

- 1) Load an existing record or fill out a new one directly in the Form.
- 2) Click the "Download" button.

- 3) Click "Confirm".

If all required fields are filled, the record will download immediately. If any fields are missing, error messages will appear on the screen indicating what needs to be corrected.

For more detailed information, refer to the [Tutorial](#) page.
